

## Simplify Your Medicaid Encounter Submissions. Keep Your Plan (and Its Members) Healthy.

Medicaid plans like yours face increasing pressure to report detailed encounter data to states. Since regulations differ across the board, the risk for non-compliance – and revenue loss – is high. Isn't it time for a better approach to reporting?

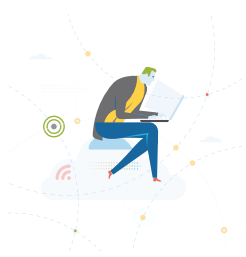

### MANAGE YOUR ENCOUNTER SUBMISSIONS WITH NEW EASE AND EFFICIENCY

With Babel Health's powerful Medicaid encounter data submissions platform, you get unmatched control of your risk adjustment data and clear insights into your plan performance. Automate and streamline submissions, resolve the issues hurting your margins and optimize your revenue opportunities.

### ENSURE CLEANER, MORE ACCURATE SUBMISSIONS

Our software offers **pre- and post-submission data validation** that incorporates the variation for all of the states in which your plan operates. Clear-cut error reporting and correction capabilities allow you to easily interpret and fix errors – so you can make sure your encounters are complete, accurate and within state-mandated deadlines.

Via a **single, user-friendly interface**, Babel Health enables you to:

- Extract, transform and load flat and ANSI file formats from multiple sources.
- Identify, interpret and fix errors prior to submission.
- Break down data issues by provider to help your team resolve them faster.
- Organize and prioritize error correction activities according to revenue risk.
- Turn around resubmissions rapidly to meet state deadlines.
- Troubleshoot data integrity issues with other business units.

### GAIN ACTIONABLE INSIGHTS & FORECAST MORE ACCURATELY

Babel Health's platform gives you **immediate access to the performance and financial information you need** to plan smart. Find out whether data has been accepted by the state and the impact it will have on your bottom line. Use real-time business intelligence to analyze cost, utilization and trends and assess the quality of member services.

Through intuitive dashboards, our Medicaid reporting solution allows you to:

- View rejects by claim type, overviews and month-over-month net encounter trending.
- Track encounter lifecycles.
- Monitor metrics, audits and milestones.
- Manage state-specific response and error reports.
- Determine risk score calculations.
- Measure program performance against KPIs, metrics and targets.

We've put all the power back into users' and business owners' hands—instead of in the hands of a vendor or IT department. Capture the big picture of your plan's performance as well as the drill-down details. Make concurrent business decisions based on the data and forecast results to prioritize and refocus your resources as needed.

## FAST DEPLOYMENT WITH NO-NONSENSE PRICING

Our technology features **straightforward, all-inclusive pricing** that encompasses licensing, maintenance, support, updates and releases. Since there’s no capital or IT investment required, you can be up and running quickly – and at a low cost.

Babel Health also supports a flexible array of solutions to fit your organization’s needs. This ranges from complete plan independence to our Professional Services model that handles the “heavy lifting” of encounter submissions on your behalf.

## SYSTEM FEATURES & BENEFITS

### Key Feature

### Benefit

Data acquisition & Integration		Connects disparate clinical, financial and administrative data sources to provide useful business insights
Dashboard & Reporting		Offers a detailed view into systemic issues you can fix to control costs, conserve resources and improve patient encounters
Error Correction Queues/Workflows		Initiates error alerts to quickly resolve issues and continuously improve daily workflows
Submission & Response File Processing		Establishes method for submitting encounter data as well as tracking and correcting errors to maximize file processing
Risk Analysis Module		Outlines program performance against KPIs, metrics and targets to measure, review and update the program for improved risk

Babel Health provides an innovative, customer-focused approach to the entire risk adjustment submission process. Our integrated SaaS ETL data management platform empowers customers to gain full transparency and control of their data, leading to critical business insights that enable smarter day-to-day decision making across all business lines.
